DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ota (US Pat. 6,034,349) in view of Yamazaki et al. (US Pat. 6,599,790).

Ota discloses a laser machining system for machining a plurality of different machine spots on a workpiece. A laser oscillator generates a laser light and laser light scanner for deflecting the laser light in order to irradiate the workpiece and create machining marks. The scanner deflects the light beams to masks (MK_n), which form a pattern on the workpiece. The laser light may be used to drill holes in the workpiece. (abstract, figure 1, col. 3, lines 17-59)

Ota does not teach laser light have a linear cross section.

Yamazaki et al. discloses a laser irradiation system for the manufacturing of semiconductors devices. The pulsed laser light emitted from the laser generator is processed into a pulsed beam having a linear cross section by using an optical system (706). (abstract, figures 7-13, col. 5, lines 8-56)

It would have been obvious to one of ordinary skill in the art at the time of the invention to use a beam of linear cross section, as taught by Yamazaki et al., in the Ota system because this ensures uniformity in the drilled holes.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
